Extruded “Full Fat” Soymeal Meal Analysis

DESCRIPTION: All Ag Com Extruded Soymeal is produced naturally, without the use of solvents or other chemicals. The bulk soybeans are cleaned free of foreign matter, dried, and extruded at 320°F (160°C). The dry extrusion process effectively reduces the anti-nutritional factors without adversely changing protein quality. The product is then cooled and ground into a consistent texture for use in animal feeds. Ag Com performs daily quality analysis to ensure optimization of the process and nutrition in every pound of meal we make.

TYPICAL ANALYSIS

Moisture	3.41%	Arginine (% DM)	2.96%
Dry Matter	96.59%	Histidine (% DM)	1.01%
Protein (crude)	38.50%	Isoleucine (% DM)	1.74%
Fat (crude)	20.10%	Leucine (% DM)	2.97%
Fiber (crude)	5.56%	Lysine (% DM)	2.52%
Cystine	0.63%	Methionine (% DM)	0.57%
Glycine	1.61%	Phenylalanine (% DM)	1.99%
Aspartic Acid	4.37%	Threonine (% DM)	1.71%
Serine	2.08%	Tryptophan (% DM)	0.41%
Glutamic Acid	6.97%	Valine (% DM)	1.81%
Proline	2.29%	ME (Mcal/lb)	1.78
Hydroxyproline	0.11%	Trypsin Inhibitor	< 10,000 TIU
Alanine	1.61%	Urease	0.01 pH rise
Tyrosine	1.24%	Ash	4.91%
Taurine	0.01%
